

Understanding and Configuring Amazon Virtual Private Cloud (VPC)

Virtual Private Cloud Overview

Logically isolated network in the AWS cloud

Control of network architecture

Enhanced security

Interconnect with other organizations

Elastic IP Address

Enable hybrid cloud (site-to-site VPN)

Single tenant dedicated server hardware

VPC cost = \$0 / VPN cost is \$0.05/hr

AWS Reference Model

Deployment & Automation

Route Tables

Internet Gateways

Elastic IPs

Endpoints

NAT Gateways

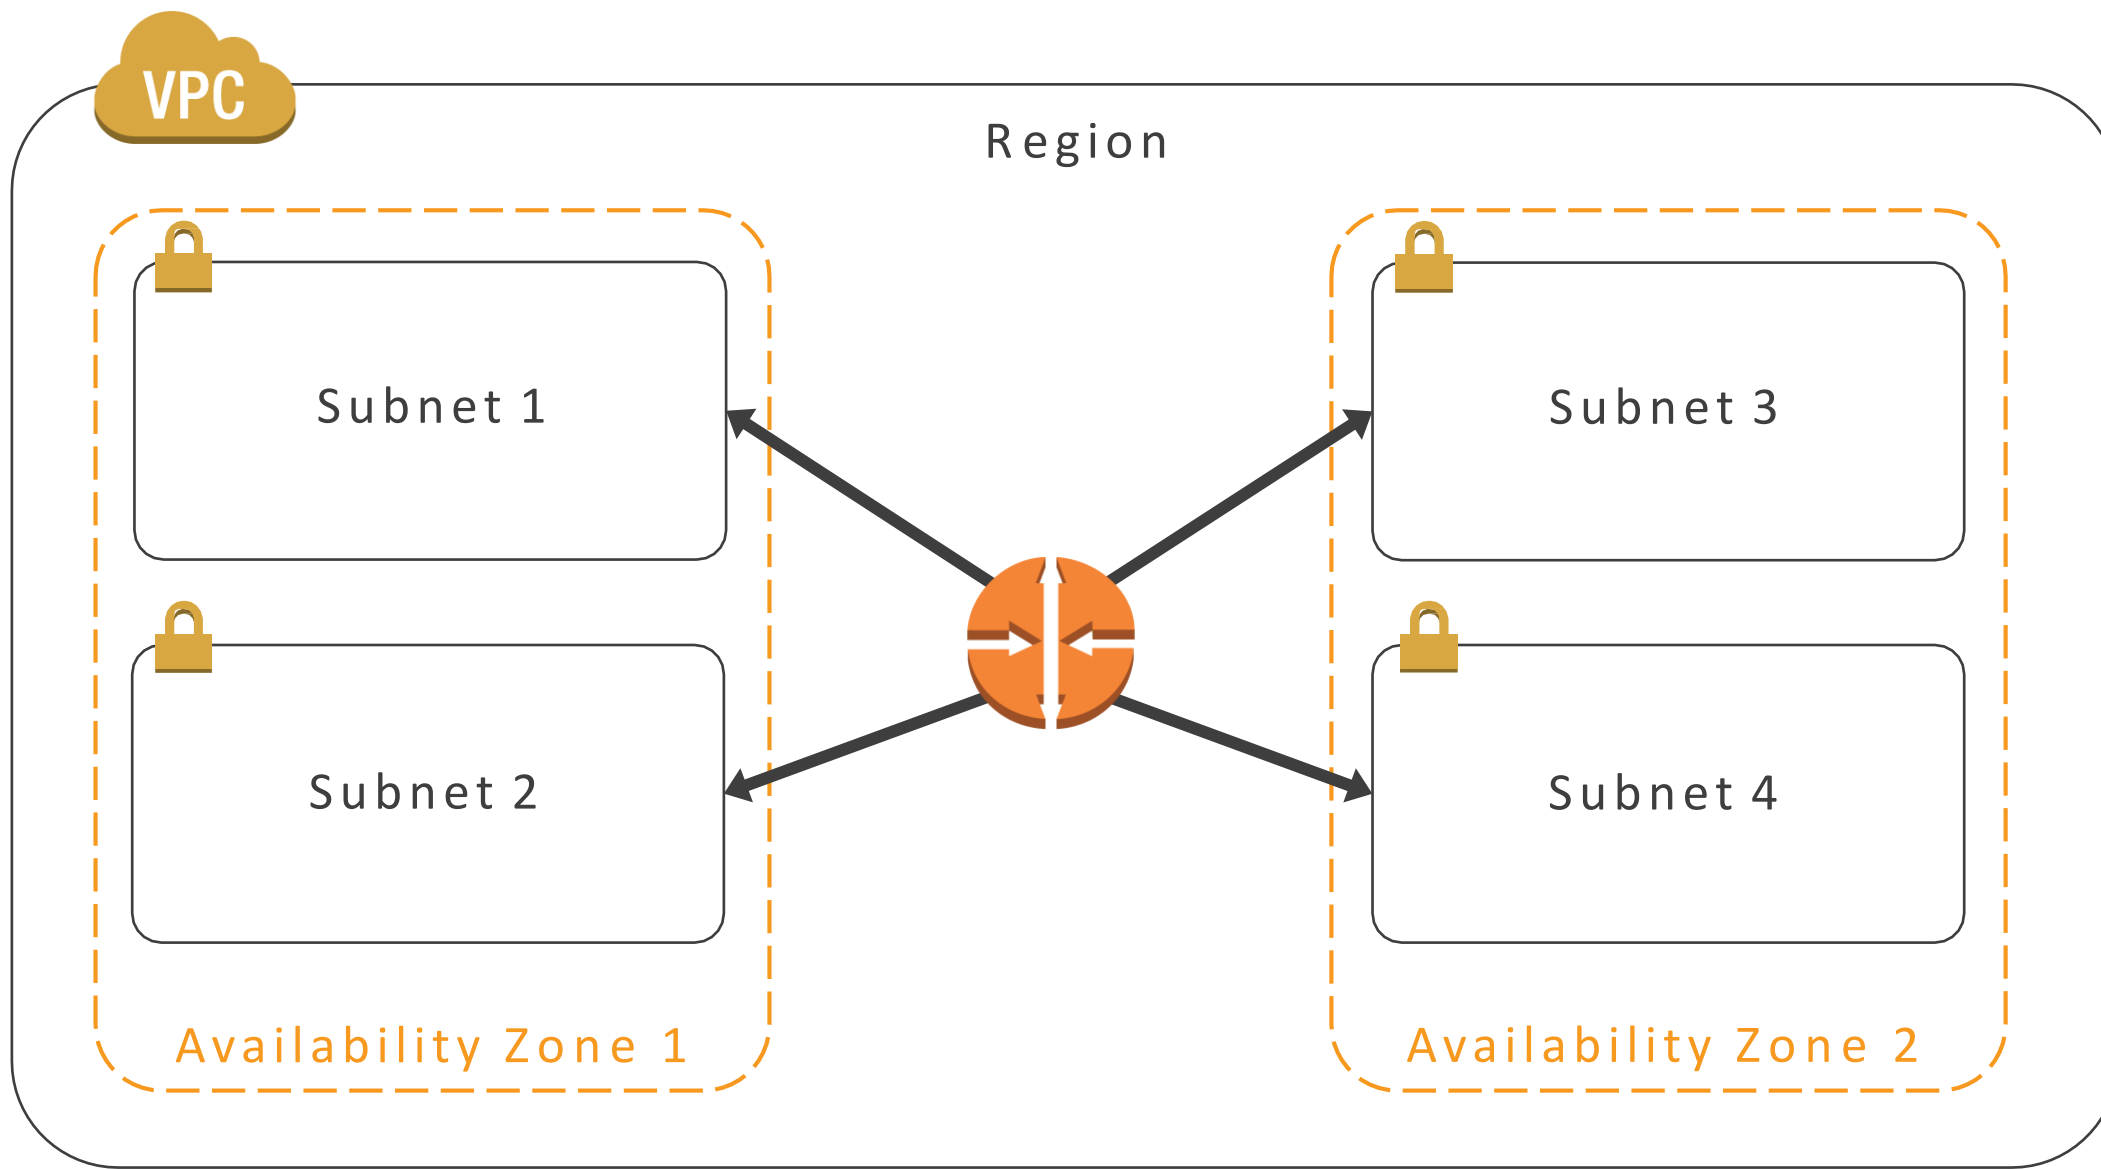

VPC Elements

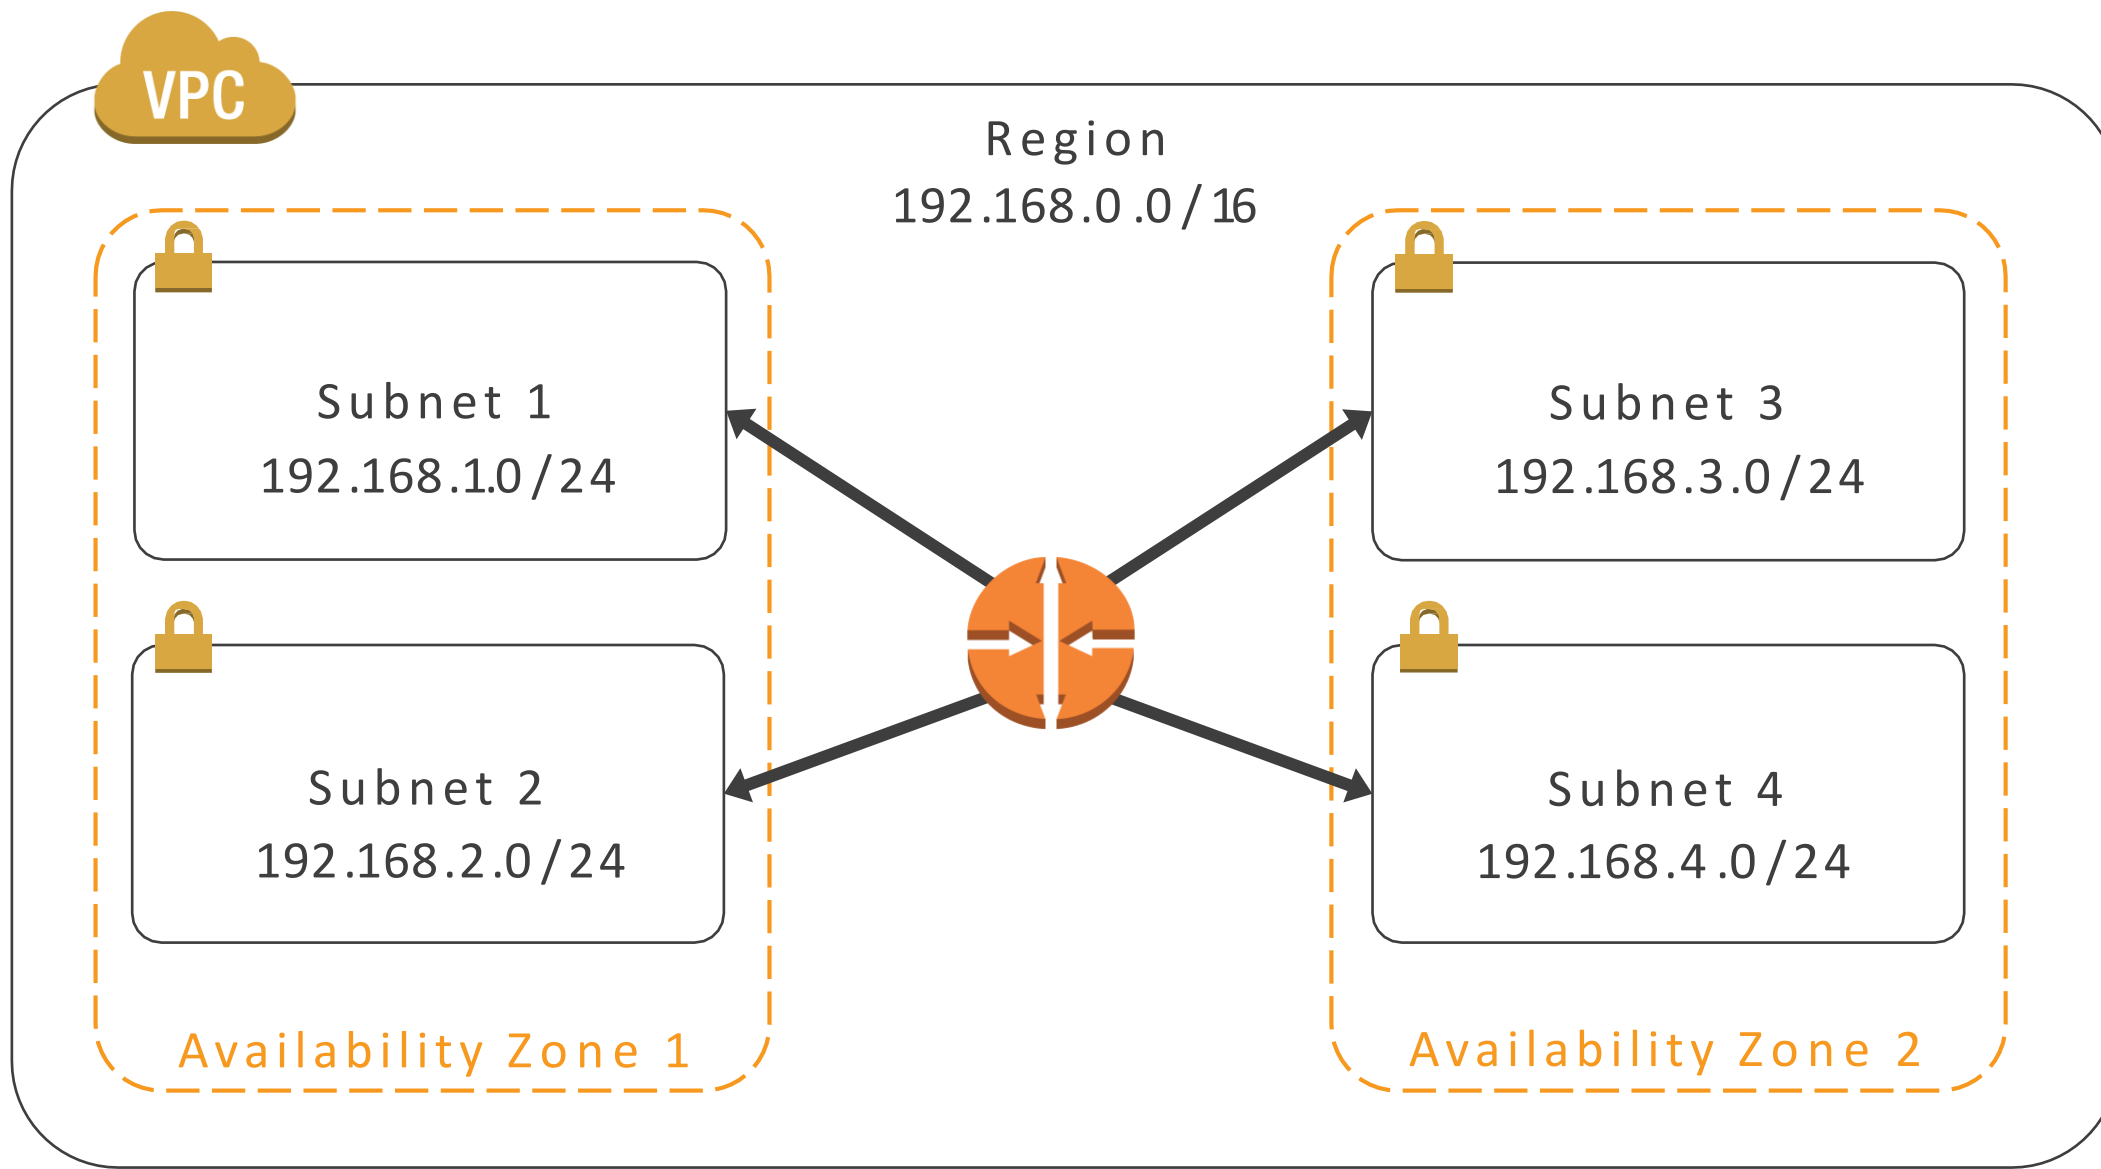

Peering Connections

Network ACLs

Security Groups

VPN

VPC Characteristics

AWS reserves 5 IP addresses per subnet (first 4 and last 1)

Private, public or VPN subnets

Subnets do not span AZs

Single Region, multi-AZ

CIDR 16 – 28

Select IP prefix

VPC Security

Security Groups

Resource level traffic firewall

- Instance, ELB, etc...

Ingress and egress

Stateful

- Return traffic allowed

Access Control Lists

Source and protocol filtering

Subnet level traffic firewall

- Separate inbound and outbound rule set

Stateless

- Traffic strictly filtered

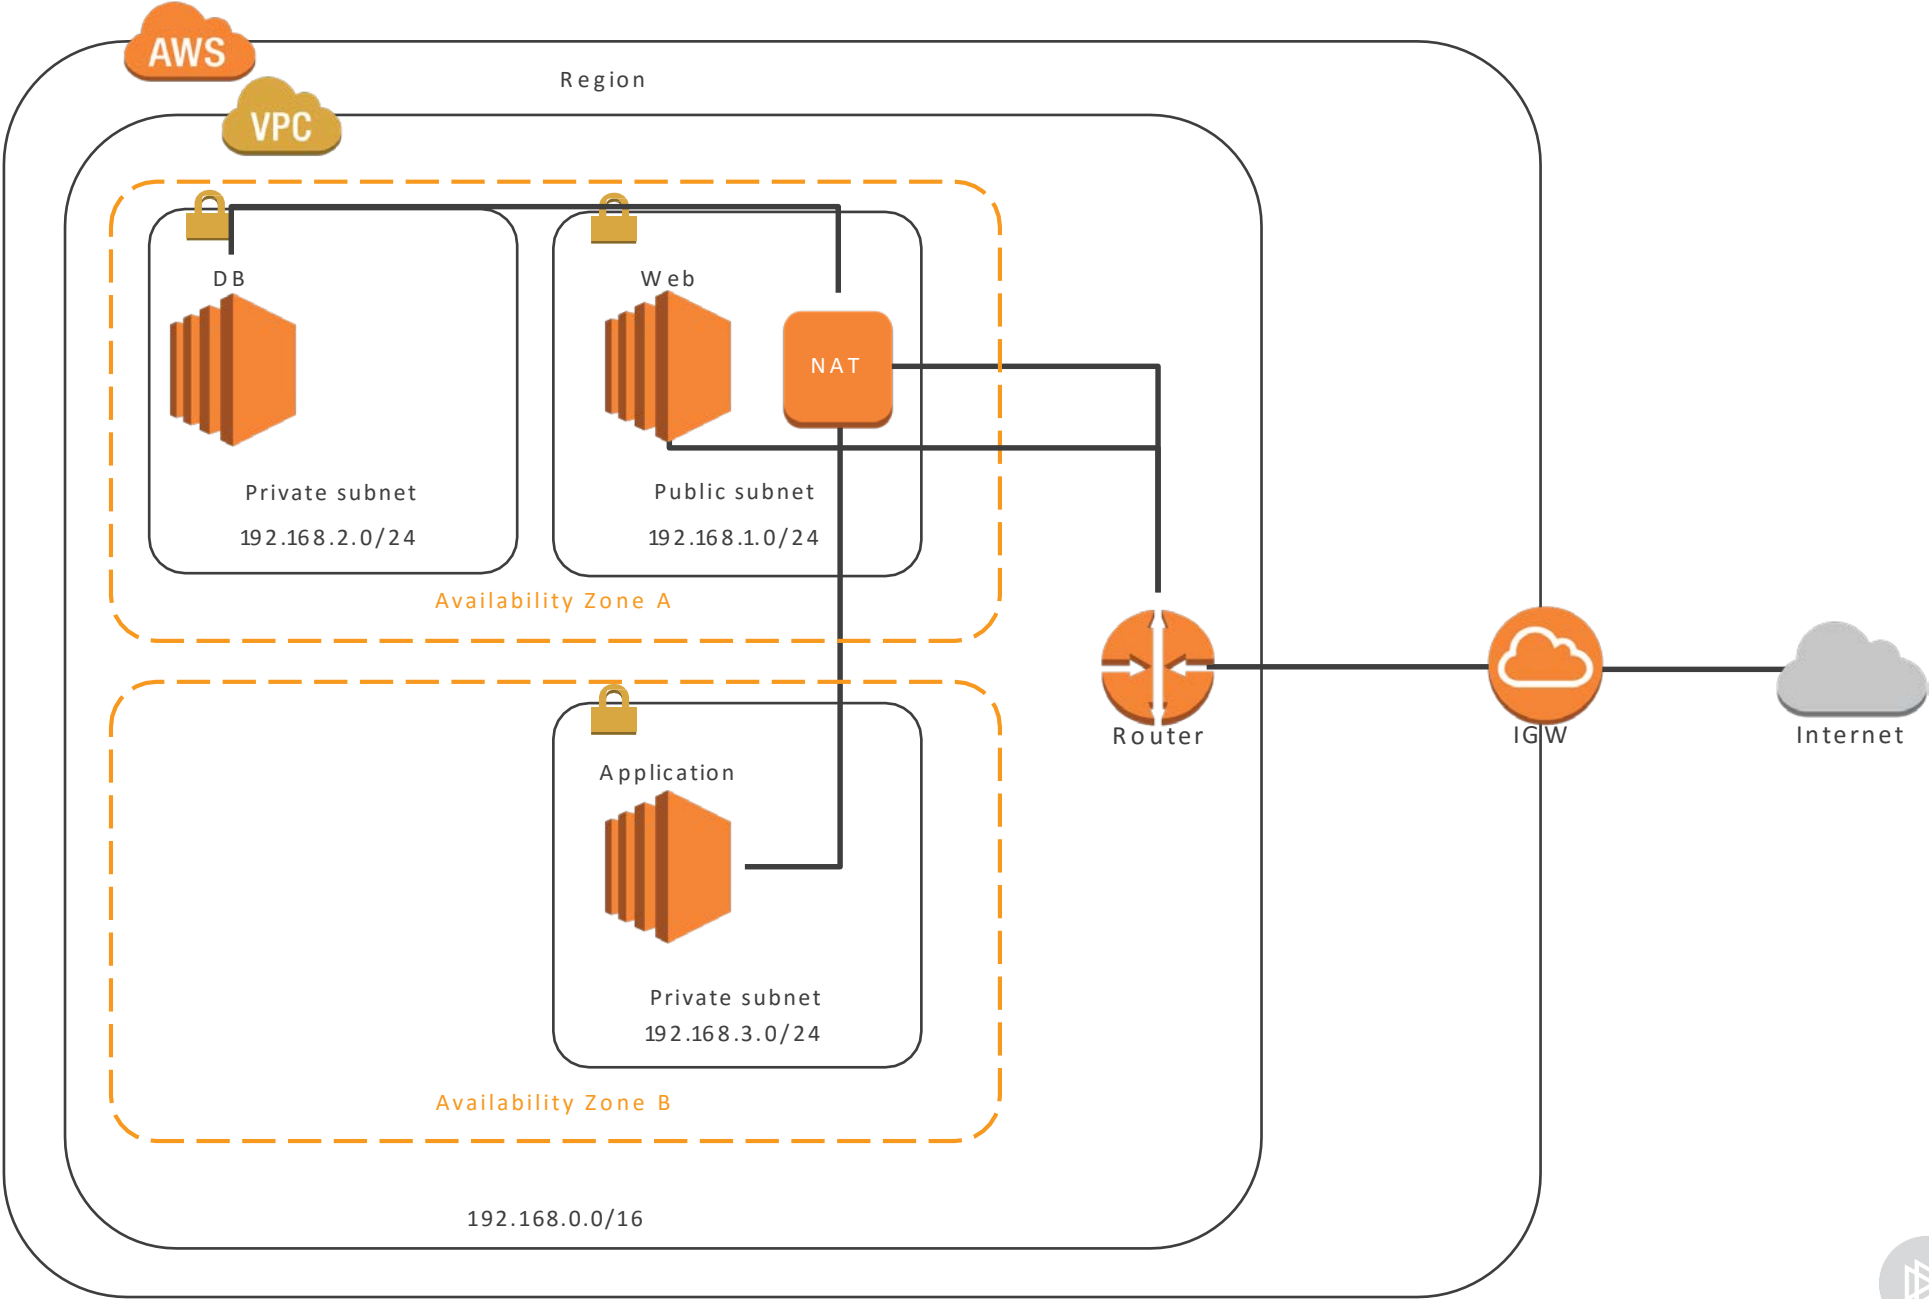

Demo

Configure Wired Brain Coffee (WBC)
VPC

Wired Brain Coffee
